Kappa Snap Latch Seal Assembly

CEMENT RETAINER

The Kappa Snap Latch Assembly is a tubing conveyed latching seal assembly that is used to operate the sleeve valve in a previously set kappa cement retainer. The Snap Latch Seal Assembly seals on the inside of the cement retainer, offering complete isolation and functionality of the cement retainer sleeve valve.

Features

- 100% Canadian manufactured.
- Provides positive control when the work string is picked up to close the sleeve valve.
- Re-engages each time the work string is lowered to open the sleeve valve.
- Helps prevent seal from disengaging during pumping operations.
- Rotate or Snap release out.
- One size operates several brand and sizes of Cement Retainers.
- Rated to operate at 440° Fahrenheit.

Applications

- Acidizing.
- Well stimulation.
- Well abandonment and cementing.
- Temporary or permanent zone isolation.
